

Ph.D. Student Evaluation – Kadir Ozaltin, M.Sc.

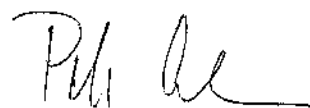

Kadir Ozaltin, M.Sc. began his Ph.D. studies at the Centre of Polymer Systems under my supervision in 09/2012. The topic of his research work deals with surface modification of polymers to enhance biological activity intended for medical applications. Mr. Kadir Ozaltin already published two papers in journals with interesting impact factor and one more is submitted.

During his doctoral studies, Mr. Kadir Ozaltin showed a broad knowledge on the problem and related areas and has proved the ability to work purposively and independently. He also participated in research projects.

On the basis of my personal experience and consultant's opinion, it can be assumed that Kadir Ozaltin, M.Sc. has proved sufficient knowledge and diligence, which are necessary for a successful fulfillment of the Ph.D. degree programme "Chemistry and Materials Technology".

Thus, it is pleasure for me to fully recommend him for the defense of his Ph.D. thesis.
